FOUR ROLES IN META-PRAGMATIC INQUIRY

Q = quadrant; Q1–Q4 name overlapping inquiry roles, not stages.

Q1 Infer and act

Update beliefs from observations;
evaluate actions under a model.

Q2 Contextualize evidence

Condition on source reliability;
examine the context of evidence.

Q3 Monitor inquiry

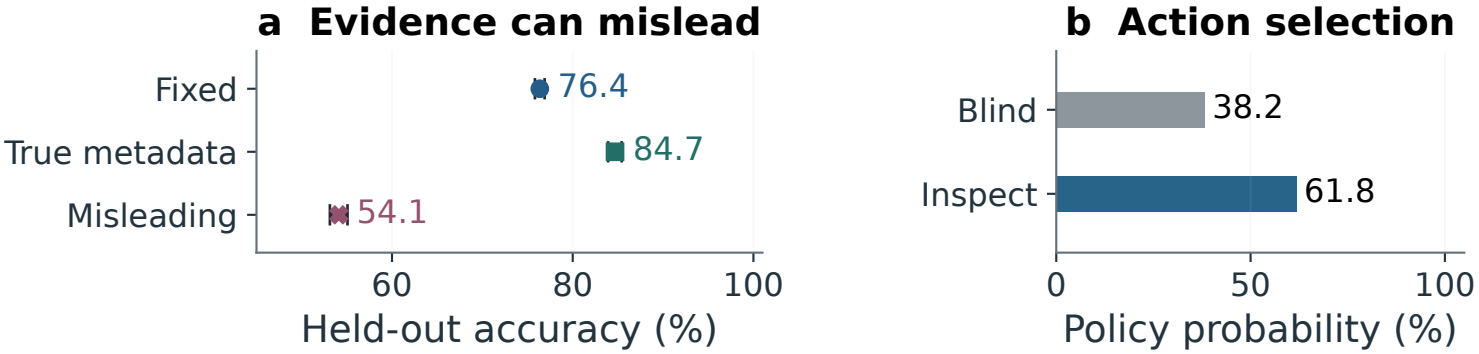
Assess uncertainty and cost;
regulate further observation.

Q4 Evaluate and revise

Challenge model assumptions;
justify revisions before adoption.

GNN = Generalized Notation Notation: executable model specifications.

Model execution → evaluated consequences → researcher-led revision



Sensor points: seed means and marginal 95% intervals.

Action bars: exact policy from expected free energy. Both tasks are synthetic.
