	TASK EVIDENCE	EVIDENCE ABOUT ITS SOURCE
INFERENCE IN A MODEL	**Q1 Infer and act** *What should be believed and done?* Update beliefs from observations; evaluate actions under a model. Failure: misspecified likelihood	**Q2 Contextualize evidence** *Which source model is warranted?* Condition on source reliability; examine the context of evidence. Failure: unreliable metadata
REGULATION OF INQUIRY	**Q3 Monitor inquiry** *Is more evidence worth its cost?* Assess uncertainty and cost; regulate further observation. Failure: confident early stopping	**Q4 Evaluate and revise** *What warrants revising these commitments?* Challenge model assumptions; justify revisions before adoption. Failure: unjustified model change

Roles may overlap. This map does not establish a hierarchy of cognitive faculties or guarantee improved performance.
